

NATHAN KROPIEWNICKI

APPLICATIONS SUPPORT ASSOCIATE

SUMMER 25(MAY 19TH - AUGUST 15TH)

TIER 2 SUPPORT

I genuinely enjoyed troubleshooting the laptops during this project. I often became so focused on the work that time would fly by. Before I knew it, it would be 6:00 PM. It was a great learning experience, and by the end, I could diagnose most issues as soon as the laptop booted up, without needing any extra resources. I became the go-to person for Tyler or Graham whenever they were too busy to handle a broken device themselves.

- Sorted through somewhere between 50-100 laptops
 - DBAN'd older models for bulk sale
 - All G4's and above
 - Troubleshot each laptop (around 30) performing swaps for SSD, Battery, RAM, display, keyboard, trackpad, CMOS battery, ribbon cables etc. These were either included with the others for bulk sale or used as loaners.
- DBAN'd the wall of old desktops and all the extra drives we had on hand.
- Imaged a few mini's and laptops

SIGMA REPORTS

I really enjoyed using this tool to create engaging reports that reflected the company's branding. Working closely with end users to produce reports that were both visually appealing and useful was a rewarding experience. It was exciting to see my work being actively used within the company.

- Catalogs - Used to see all catalogs, schema, tables, and columns that would be used by end users along with comments for everything.

- Audit Designs - For Dave Huitsing
- Ready Mix and Materials Totals - For Kara Oppenhuis
- Daily Plant Usage - For Dave Huitsing
- Customer List by Salesman - For Dave Huitsing
- Trade Agreements - For Dave Huitsing
- Bag Mixes - For Dave Huitsing
- Customer List - For Jordan Peloquin
- Ticketed Volume - For Dave Huitsing

DATABRICKS

I gained a strong understanding of the Databricks platform and how it functions. After attending several virtual sessions during the Databricks AI Summit and learning about their new initiative to expand into education, my immediate thought was how I could bring this platform to my own school. I genuinely enjoyed working with and learning through Databricks, and I plan to continue exploring the free version on my own time.

- Void Reasons - Added the void reasons table to the data lake and then used it to fix a report by including the reason a ticket was voided.
 - Ticket Staging Table - Worked on this for Logan. Created a gold table for future use in the SCM report project.
 - Workpaper Import App - Took the basic template Bradley had in place and revamped it. Added additions like "How to use me", "Logs" and "Delete Records" sections. Added a loading animation on the logs tab of a Ozinga truck pouring concrete if the pipeline is running. I also made it more visually appealing with company logos and colors.(I'm really happy with how this turned out)
 - BLS Data Ingestion - Worked on transforming data from raw json format to readable tables. I created a pipeline within the medallion architecture to create a bronze and then silver base table for this data.
 - SCM Report - Held a meeting with Brian to go over what this report would look like with some people from finance.
 - By request of Nick Palm, added price to ready_mix_dispatch_tickets and travel_minutes to ready_mix_dispatch_orders
-

SHADOWING

This was a great opportunity to gain a deeper understanding of how the company operates overall, as well as how IT workflows function in real-world business settings. I learned a lot, even from spending just an hour with one person. My goal was to absorb as much as I could, and I definitely found these sessions to be valuable.

- Tyler - Went over Imaging and active directory
- PJ - Went over networking basics as well as some of the software he uses.
- Dale - Went to Watseka to replace a firewall.
- Brian K - Went over DBANing, showed me e-waste.
- Brian M - Went over LinkedIn, as well as X++ and DFO basics.
- Chris R - Went over Apex, and XBE.
- Alex H - Went over Integra and Digital Fleet.
- Nick - Went over Airflow, and data ingestion.
- Jeff - Went on a tour to Joliet, Channahon, and Rock Creek
- Tom - Went over salesforce, and AI chatbots
- Kara - Everything databricks, sigma, powerbi, devops and ssms
- Logan - Shadowed a meeting
- Chris L - What is Ozinga

CERTIFICATIONS AND ACCREDITATIONS

Whenever I had downtime between projects, I used the opportunity to take online courses on relevant topics. I explored platforms like LinkedIn Learning, Databricks, HackerRank, and DataCamp. The Databricks courses, in particular, proved to be the most beneficial for deepening my understanding of the platform.

- Databricks
 - Academy Accreditation - Azure Databricks Platform Architect
 - Academy Accreditation - Databricks Fundamentals
 - Academy Accreditation - Generative AI Fundamentals
- Others
 - Hands-On Introduction: SQL
 - SQL (Basic) Certificate
 - Intermediate SQL - Data Reporting and Analysis
 - SQL (Advanced) Certificate
 - Introduction to Sigma
 - Networking Foundations : Networking Basics
 - Networking Foundations: IP Addressing
